</table>
ou’ve certainly heard the saying, “You have to walk before you can run.” The same is true with “building” athletes. Before you can play any sport, you need to learn the basic building blocks of athleticism. That’s the premise behind physical literacy, one of the core values of the Lacrosse Athlete Development Model.

The Lacrosse Athlete Development Model is built on the principles of the American Development Model (ADM), launched by the United States Olympic Committee in 2014 with the input of various sports national governing bodies. ADM was initiated to help Americans realize their full athletic potential and utilize sport as a path toward an active and healthy lifestyle.

The model utilizes long-term athlete development concepts to promote sustained physical activity, participation in sport, and Olympic and Paralympic success. These concepts have been tailored to create a framework for developing American youth through sport.

There are six core values of the Lacrosse Athlete Development Model:

- Designed for Development
- Fun and Kid-Centered
- Small-Sided and Free Play
- Multi-Sport Participation
- Physical Literacy
- Coaching Training

Each of those core values plays a critical role in the proper development of children and athletes. Physical literacy is where it all starts. Teach kids physical literacy and you give them the ability, confidence and desire to be physically active. Then they’ll be able to perform on the lacrosse field and be able to participate in many other physical activities they desire in the future.

60 Ways to Play gives you the tools and understanding behind using the principles of physical literacy to help children discover how their body works and how to move on their own without constant interference or “over-coaching.”

We hope you find the information and activities presented in this book useful in working with athletes, young and old.
The goal of any fitness educator or mentor is to not only inspire kids to move, but to help them move better. While we should strive to eventually teach children how to do a movement with precise accuracy, the process of learning involves quite a bit of misfires, shortcoming, and experimentation. When we stop fighting and start embracing this learning curve, the kids themselves become the best teachers. This decreases frustration for everyone involved, while actually increasing a child’s ability to learn movement!

This approach does not suggest we become absent or completely passive as fitness educators when it comes to movement technique and accuracy. It’s quite the opposite, actually.

With varying degrees of strategic guidance, and providing an opportunity for kids to “interpret” movement, we can provide children just enough coaching so they can discover the best way to move on their own.

Guided and creative discovery are two widely utilized and effective methods for doing this.
Developing Coordination with Movement Variables

During guided discovery, we provide a frame of reference for movement, but we limit our corrective interventions. Through a series of applying different “movement variables,” children begin experiencing the basic constructs of a movement pattern and develop a powerful frame of reference that makes coaching and learning much easier.

For example, there is a specific technique to proper skipping. As an educator, we could recite a lengthy list of the criteria for ideal body position, rhythm, cadence, etc. to a youngster. Or, we could facilitate a child’s own discovery of the most efficient way to skip by introducing a wide array of possible ways to skip. Arms and legs wide, body low, body high, feet soft on the ground, feet hard on the ground, etc.

In the latter, children become innately more aware of how their body moves and the purpose of those movements. It also facilitates critical thinking, increases interest, and enhances motivation.

Even if a child is not developmentally ready to learn the skill, guided discovery will allow a child to explore all the movement possibilities without fear of “doing it wrong.”

It’s important to note that during guided discovery, we do want to insure that the most fundamental constructs of a movement are present. However, more specific aspects are left to the children to discover through various movement experiences.
CREATIVE DISCOVERY

**Translating Words and Sentences to Movement**

While guided discovery relies on some basic criteria for a recognized movement, creative discovery is a process where we provide no guidance, only simple prompts, allowing children the freedom to interpret these prompts as they move.

In 60 Ways to Play we share a creative discovery strategy that allows kids to solve movement problems based on simple, abstract word cues. This fun physical development strategy integrates the worlds of movement and grammar as kids interpret new words, punctuation, and even emojis and put them together in movement “sentences.”

For example, take 3 words; hop, shake, and roll. Instruct the children to put those three words together in a movement sequence, repeating until you say stop. Each child will have a unique interpretation. They will also learn new interpretations and possibilities from watching others. Then, add in punctuation, discussing what a period, comma, even a question mark, may mean to the movement flow.

By utilizing creative discovery through movement sentences, children learn how to construct novel movements, sequences, and transitions in a natural, personalized way. This is yet another way to facilitate learning in a non-intimidating, fun, and active environment! It’s time to play with a purpose!
In 60 Ways to Play, we provide you with sixty fun, unique, and highly effective play-based warm-up and exercise circuit activities utilizing simple movements with both guided and creative discovery.

To make these fast and simple for fitness educators to set up and facilitate, we created all of the activities with NO EQUIPMENT REQUIRED! We include circuits for indoors and outdoors, as well as for individuals, partners, or groups. These circuits can be modified to last from 60 seconds to 5 minutes. Combine circuits to create fun and challenging 20-minute workouts!

The activities in 60 Ways to Play are ideal for the beginning of an exercise session, within an exercise session, as a short movement break during school, or just for fun!

The illustrations and video links help guide fitness educators in real time, so little to no preparation time is required! We’ve also included a “homework” challenge at the end of every circuit. This is an opportunity for you to extend your influence beyond your time with them, increasing both your impact and value!

60 Ways to Play is your simple guide to help children develop the body awareness, movement confidence, and other essential skills they need for a lifetime of fun and fitness with physical activity.

Let’s Play!
GUIDED DISCOVERY

Playing with Movement Variables

Learn All the Different Ways the Body Can Move!

For all of the circuits in this section, combinations of movement variables are used with simple fundamental movement skills. Resist the temptation to “over-coach” these skills! Guide the children to the basic constructs of the movement, then allow them to develop their own frame of reference for more advanced execution.

See the chart on the following pages for the suggested simple fundamental movement patterns, as well as examples and descriptions of movement variables involving space, effort, and relationships with objects and people that can be applied to any fundamental movement skill.

Click on each to see a short demonstration video.

References:
FUNDAMENTAL MOVEMENT SKILLS

Stationary Movement Control

- Forward/backward bend
- Side bend
- Rotation
- Single leg balance
- Squat
- Push up
- Alternating lunge
- Crab hip hold
- Plank
- Jumping Jack
- Cobra

FUNDAMENTAL MOVEMENT SKILLS

Locomotion

- Roll
- Crawl
- Walk
- Run
- 1 leg hop
- 2 leg hop
- 1 leg jump
- 2 leg jump
- Lateral shuffle
- Gallop
- Bound
- March
- Skip
- 2 leg jump
- 1 leg jump
- 2 leg hop
- 1 leg hop
- Walk
- Run
- Roll
- Crawl
- 2 leg hop
- 1 leg hop
**MOVEMENT VARIABLES**

**Force**
These variables will allow children to exert various degrees of muscular force for the purpose of understanding the contrast of muscular tension needed for accomplishing a movement task.

<table>
<thead>
<tr>
<th>Effort</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Strong</td>
<td>Children should exert maximal force. Other words to use include: firm or heavy</td>
</tr>
<tr>
<td>Weak</td>
<td>Children should exert the minimal amount of force to achieve the movement goal. Other words to use include: fine or light</td>
</tr>
<tr>
<td>Moderate</td>
<td>Children should exert about half of their maximal force. Other words to use include: medium or neutral</td>
</tr>
</tbody>
</table>
These variables will allow children to explore the contrast of fast and slow actions as well as the varying gradations in between. This also includes the concepts of speeding up (acceleration) and slowing down (deceleration).

**FAST**
Children should move as fast as they can, NOT as fast as they can’t. In other words, they should move as fast as they can while maintaining control. Other words to use include: quick, sudden, speedy, rapid, or use analogies such as: sprint; a race car in 4th gear; or a cheetah.

**SLOW**
Children should move as slowly and deliberately as possible. Other words to use include: sluggish and leisurely, or use analogies such as: a turtle or snail.

**MEDIUM**
Children should move at a pace halfway between fast & slow. Other words to use include: normal and moderate, or use the analogy of: jogging as opposed to walking or sprinting.

**ACCELERATING**
Children should begin by moving slowly, and gradually speed up. An analogy to use is stepping on the gas pedal to speed up a car. This may need to be prompted during the circuits (Faster! Faster! Faster!).

**DECELERATING**
Children should begin by moving at a moderate or normal pace unless otherwise instructed, and gradually slow down, but not stop. An analogy to use is stepping on the brake pedal to slow down a car. This may need to be prompted during workouts (Slower! Slower! Slower!).
Flow
These variables will allow children to explore the continuity of movement from smooth continuous movements to halting movements.

**CONTINUOUS FLOW**
Children should move in a free flowing, smooth way without stopping. This would represent the way in which most movements are performed naturally.

**STOP-AND-GO FLOW**
Children should move in a halting movement pattern where there are slight pauses between movements, but movement does not completely stop. Other words to use include: bound, restrained, cautious, and jerky.

Space
These variables will allow children to explore the various vertical positions of the body.

**HIGH**
The designated body part is to be displaced as far from the ground as possible.

**LOW**
The designated body part is to be as close to the ground as possible.

**MEDIUM**
The designated body part is halfway between the head and the feet.
### Directions & Pathways

These variables will allow children to explore various ways of moving in all 3 planes of motion, using the whole body, or parts of the body either on the ground or in the air. These movements may be done in place as stationary movement control activities with parts of the body moving in a specific direction or path, or as a locomotion activity moving the whole body in the specified direction or pathway. For example, a “squat” fundamental movement skill can be done in a zigzag path either moving or stationary.

<table>
<thead>
<tr>
<th>Pathway</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>STRAIGHT</strong></td>
<td>Children will perform movements in the sagittal plane, which is a straight line, moving either forward or backward.</td>
</tr>
<tr>
<td><strong>DIAGONAL</strong></td>
<td>Children will perform movements that deviate at an angle from a straight path. If they are moving their whole body in a diagonal path, make sure to mark or denote the straight path so they have a frame of reference. Otherwise they are still essentially just moving straight.</td>
</tr>
<tr>
<td><strong>ZIGZAG</strong></td>
<td>Children will perform movements that repeatedly angle to the left &amp; right. Make sure the movements are sharp to distinguish them from curved movements. An example of in-place zigzag movements would be to draw angled letters, such as “Z” or “M” in the air with a limb. An example of locomotion zigzag movement patterns would be to sprint to cones arranged in a “Z” pattern.</td>
</tr>
<tr>
<td><strong>CURVED</strong></td>
<td>Children will perform repeated semi-circular movements, or “S” turns with smooth rounded edges rather than sharp angled turns as in the zigzag patterns. An example of in-place curved movements would be to draw curved letters, such as an “S” or “C” in the air with a limb. An example of a locomotion curved movement patterns would be to skip around a series of cones.</td>
</tr>
<tr>
<td><strong>LATERAL</strong></td>
<td>Children will perform movements in the frontal plane, which is side to side or moving to the left and right. An example of in-place lateral movements with the limbs would be jumping jacks. An example of lateral locomotion movements would be a lateral shuffle.</td>
</tr>
</tbody>
</table>
**CIRCULAR**
Children will perform movements in a complete circle either clockwise or counterclockwise. As opposed to curved movements, circular movements are complete and closed circles rather than just curves or “S” turns. An example of in-place circular movements would be arm circles or spinning the whole body in either direction. An example of a locomotion circular path would be to bear crawl completely around a cone or another person.

**VERTICAL**
Children will perform movements where they transport a limb or their whole body up and down in relation to gravity. An example of in-place vertical movements would be squats or a jump. An example of locomotion vertical movements would be to pair a locomotion activity with a specific direction or pathway, such as hopping in a circular path.

**Ranges**
These variables will allow children to explore the size of their movements and the reach of individual limbs or their entire body. These refer to ranges of motion from the smallest detectable motion to the fullest range of motion around a joint. Exploring range can be done in-place or while performing a locomotion activity in a specific direction or pathway.

**LARGE**
These movements refer to expansive ranges of motion of the whole body where limbs and torso are extended as fully as possible within the confines of the movement skill being performed. This variable typically describes movements of the entire body working as a whole, such as making the body LARGE while running.

**SMALL**
These movements refer to minimal ranges of motion of the whole body where limbs and torso are flexed as fully as possible within the confines of the movement skill being performed. This variable typically describes movements of the entire body working as a whole, such as making the body SMALL while balancing on one leg.
### Location
These variables will allow children to explore movements either in a stationary position or moving throughout a defined space.

<table>
<thead>
<tr>
<th>Location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>In place</strong></td>
<td>Movements done in place refer to all of the space the body can reach while stationary, encompassing a small area around each child with the arms and legs fully extended. For example, rolling back and forth in place.</td>
</tr>
<tr>
<td><strong>Moving</strong></td>
<td>The suggested fundamental movement skill is done while moving within a defined space, either indoors or outdoors. This can be done with standard locomotion activities or paired with stationary movement control activities (i.e. squats while moving through a space).</td>
</tr>
</tbody>
</table>

### Objects & People
These variables will allow children to explore the various ways to navigate around people or objects. Note that “objects” can be as simple as lines on the ground, curbs, backpacks, or other common items.

<table>
<thead>
<tr>
<th>Objects &amp; People</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Over</strong></td>
<td>These movements involve transporting the body or parts of the body over the top of objects or other people. For instance, kids would be instructed to skip while moving OVER low hurdles that are placed throughout the space.</td>
</tr>
<tr>
<td><strong>Under</strong></td>
<td>These movements involve transporting the body or parts of the body underneath objects or other people. For instance, kids would be instructed to bear crawl while moving &amp; crawl UNDER any other child they come into contact with.</td>
</tr>
</tbody>
</table>
ALONGSIDE
These movements involve transporting the body or parts of the body on one side of an object or another person. For instance, kids would be instructed to do log rolls ALONGSIDE a row of cones, or they could skip ALONGSIDE another child (shoulder to shoulder).

ONTO
These movements involve transporting the body or parts of the body on top of an object or another person. For instance, kids would be instructed to jump ONTO a box & crawl off.

OFF OF
These movements involve transporting the body or parts of the body from of an object down to the ground or to another object. For instance, kids would be instructed to jump OFF OF a box.

IN FRONT OF
These movements involve transporting the body or parts of the body in front of an object or another person. It is important here to define the front or back of an object if it is not obvious (the front or back of a car is obvious, but there is no front or back of a cone unless it is designated). For navigating around other people, a child would always have to be located on the front side of another person who is standing, or on the side with their head if they are lying down. The child instructed to be IN FRONT OF another child can be either looking at the person or have his back to that person. For instance, kids would be instructed to shuffle laterally IN FRONT OF a partner (facing away from them).

BEHIND
These movements involve transporting the body or parts of the body in back of an object or another person. It is important here to define the front or back of an object if it is not obvious (the front or back of a car is obvious, but there is no front or back of a cone unless it is designated). For navigating around other people, a child would always have to be located on the back side of another person who is standing, or on the side with their feet if they are lying down. The child instructed to be BEHIND another child can be looking at the person’s back or have his back to that person’s back. For instance, kids would be instructed to shuffle laterally BEHIND a partner, facing their back.
These movements involve transporting the body or parts of the body through the middle of two objects or two other people. For instance, children could be prompted to hop while moving between other people who are also hopping.

**Body Parts**

These variables will allow children to explore the ways the body parts can move into various positions and shapes.

<table>
<thead>
<tr>
<th><strong>NARROW</strong></th>
<th>These movements involve bringing the arms and/or legs as close together as possible. For instance, children could be instructed to make their limbs as NARROW as possible while doing squats.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>WIDE</strong></td>
<td>These movements involve keeping the arms and/or legs as far from the torso as possible. For instance, children could be instructed to make their limbs as WIDE as possible while galloping.</td>
</tr>
<tr>
<td><strong>CURVED</strong></td>
<td>These movements involve creating rounded soft shapes with the arms, legs, or torso. For instance, children would balance on one leg while making their torso and arms into CURVED shapes. This can be prompted by saying that those shapes would look like the letters, “C,” or “S.”</td>
</tr>
<tr>
<td><strong>TWISTED</strong></td>
<td>These movements involve rotating the torso or arms and legs about a central axis or intertwining the arms and legs to look like a “pretzel.” For instance, children would be instructed to hold a front plank position with their arms, legs, or torso TWISTED.</td>
</tr>
</tbody>
</table>
SYMMETRICAL
These movements involve making sure both sides of the body look the same if an imaginary line was drawn down the middle of the body from the top of the head to between the feet. For instance, children would be instructed to do SYMMETRICAL jumping jacks with the arms and legs, so both feet and arms move the same distance in the same plane from the mid-line of the body.

ASYMMETRICAL
These movements involve making sure both sides of the body are moving differently from each other if an imaginary line was drawn down the middle of the body from the top of the head to between the feet. For instance, children would be instructed to squat with the arms asymmetrical. They would perform the movement with one arm straight out to the side of them, and the other arm bent.

People with People
These variables will allow children to explore the various ways to effectively interact with other people.

SOLO
This situation is where we have one person at a time move while the group (or partner) watches. If kids are partnered up, or in multiple small groups, then only one would do the movement task at a time. This gives children a chance to get direct feedback from others and allows those watching to visually learn how other kids interpret movement variables. For instance, each child would take a turn doing a SOLO side shuffle in a curved path and making their arms and legs as wide as possible.

INDEPENDENT
This situation is where we have the children moving on their own around others simultaneously. This will help improve spatial awareness as they have to avoid bumping into the other children. They can either all be doing the same movement patterns or they could each choose their own fundamental movement skill to modify. For instance, each child would move INDEPENDENTLY as they choose from doing either a skip, crawl, or roll, with the body low, in a zigzag pattern.
| **Partners** | This situation is where kids are paired up and doing the same, or complementary, movement patterns. For instance, two kids would be PARTNERED and both march alongside each other going forward and back. Or two kids could be PARTNERED and one do a single leg balance with limbs wide, while the other gallops around her in a circle. |
| **Groups** | This situation involves one or more groups of 3 or more kids each interacting competitively or cooperatively. For instance, there would be two GROUPS of kids, each in a circle formation facing outward and rotating clockwise trying to get to the other side. To make this competitive this could be a race to be the first group to reach the other side. |
| **Mirroring** | This situation involves partners or groups facing each other, with one leading and one following. Those following would do the same movements as the leaders, as if looking in a mirror. This would mean that if the leaders shuffle to their left, the followers would shuffle to their right so they are always in front of each other moving the same way. If the leaders move their left arms up, the followers move their right arms up. |
| **Matching** | This situation involves partners or groups facing each other, with one leading and one following. Those following would do the movements moving the same limbs in the same direction as the leaders. This would mean that if leaders shuffle to their left, the followers would shuffle to their left so they are moving in opposite directions. If the leaders move their left arms up, the followers also move their left arms up. |
| **Leading** | This situation involves one person leading while others standing behind the leader follows his or her lead either in a stationary activity or a locomotion activity. For instance, the LEADER would bound in a curved path with accelerating speed. The followers would follow behind and keep up with those movements. |
FOLLOWING
This situation involves one person leading while others standing behind the leader follows his or her lead either in a stationary activity or a locomotion activity. For instance, the leader would balance on one leg, while moving the arms in asymmetrical patterns while the FOLLOWERS would do the same.

MEETING
This situation involves two or more kids moving either their entire body, or parts of their body toward one another during a stationary movement control, or locomotion activity. Meeting is often accompanied by “parting” in the movement variables.

PARTING
This situation involves two or more kids moving either their entire body, or parts of their body, away from each other during a stationary movement control, or locomotion activity. Parting is often accompanied by “meeting” in the movement variables. For example, two children lateral shuffle towards one another and meet, then they part, moving away from one another.

Using this chart along with the “cheat sheet” we provide you in the following pages, the combinations are nearly endless!

In each of the guided discovery circuits we have designed for you, you will see a fundamental movement skill in the left column with one or more Movement Variables next to it. The child repeats the movement or combination of movements for the designated amount of time, then transitions to the next combination. In some instances, the workout prompts the child to change the variable midway through the exercise. Most circuits take about 3-5 minutes.

There are 5-10 different circuits each for different skill levels, facilities, and number of children involved, for a total of 30. These have been divided into mini-sections with any specific instructions necessary. All workouts are given a name to get the kids engaged. It is recommended that a short “vocab” review of the necessary terms, i.e. “accelerating, asymmetrical, etc.” is done prior to a circuit.

We recommend beginning with the “Starter Circuits” to familiarize both you and the children with the process and flow of the activities. Feel free to utilize 1-2 combinations from any circuit just to get kids up and moving after they’ve been inactive. This can take less than a minute. Just choose your favorite combos and do them for a quick “movement break” between other activities or during any other part of the day. Add music to create an even more engaging environment!
Individual and combinations of circuits can be done every day, even multiple times per day. They can also be spread out through a week.

You will see that each movement or variable in the circuit is linked together with a plus $+$ sign, or an arrow $\rightarrow$.

The $+$ sign is like an “and”. Everything after a plus sign is added to the original movement and the combination is done for the entire duration of time.

**FOR EXAMPLE:**

Skip $+$ Arms $
\begin{array}{c}
\text{HIGH} \\
\end{array}$ $+$ Legs $\text{WIDE}$

would mean that the child would skip for 10-20 seconds with her arms high and her legs wide, then she would transition to the next combination.

When there is an arrow $\rightarrow$, instruct the child to switch to that movement roughly halfway through the circuit time.

**FOR EXAMPLE:**

Baby crawl $+$ Chest $\begin{array}{c} \text{LOW} \end{array}$ $+$ Fast $\rightarrow$ slow

would mean that the child begins in a baby crawl with his chest low, moving fast, then 5-10 seconds into the movement, he would switch to slow speed.

If the $+$ designates an “and”, the $\rightarrow$ designates a “then”.

Again, prior to beginning a circuit, familiarize the children with any new vocabulary. It may also be necessary to read through the circuits to determine which best suits your needs in regards to facilities, number of children, and ability level. Don’t forget to refer to the movement variable chart for clarification.
In any case, if you forget the definition of any Movement Variable, there really is no “wrong answer” as long as the notions of common sense and safety are followed. Most of the combinations can be done either moving or in place (limited space). Depending on the amount of room you have available, feel free to adapt the exercises to fit your needs.

For Movement Variables like “over,” “under,” “on to,” “off of,” or others that would suggest objects or equipment, consider that other children, desks, benches, walls, and even lines on the ground can still reinforce these concepts of orientation.

**FOR EXAMPLE:**
Children can step onto and off of a line.
They can do a plank over a pencil
They can move alongside a wall.

Once the children understand these concepts, let them get creative in finding ways to interpret the variable.

Beginning a program like this, the fundamental movement patterns are going to appear awkward. Remember, we are merely guiding children on a journey of discovering how to move. With patience and just enough guidance, they will develop high level skills that last a lifetime.

On the following page, you will find a “cheat sheet” for guided discovery activities. This guide can be folded up and kept with you as a quick reference for designing your own circuits!

Just print the page and fold it on the dotted line. Chose one of the fundamental movement skill from the front page and apply 1 or more Movement Variables to it and do each combination for 10-20 seconds. Repeat for different fundamental movement skill and Movement Variable combinations!
Have fun learning how to use the Movement Variables!

The five starter circuits are designed to introduce the contrasts of the different fundamental movement skills and Movement Variables for effort, space, and relationship to objects and other people.

These circuits include only 4 fundamental movement skills each, so children are able to learn and get familiar with them without being overwhelmed. The Movement Variables are presented in contrasting manner in subsequent exercises, so it helps children create a frame of reference for effort, space, and relationships to people and objects. The Starter Circuits have 13 movement combinations, while the other circuits have only 7.

While the instructor can modify the exercise and transition time as needed, it is recommended that each fundamental movement skill and movement variable combination is performed for 10-20 seconds with enough transition time to allow for any explanation, demonstration, or further clarification.

**Can You?**

**Breathe With Your Belly**

1. Put one hand on your chest and the other across your belly.
2. Take in a deep breath through your nose and see if you can make your belly expand for 5 seconds without your chest lifting up too high.
4. Try doing this 5 times in a row!
Have fun with the Movement Variables Anywhere!

These are designed to be done indoors or outdoors with a small amount of space to allow children to move across a room, field, or small grid designated by cones. If space is not available, the instructor can modify the activities to be done in place, which will encompass a small area around each child marked by the space occupied by the arms and legs fully extended.

Perform the fundamental movement skill in combination with the suggested Movement Variables. Note that when there is an ⚡ symbol, instruct the child to switch to an opposing movement variable roughly halfway through the circuit.

EACH EXERCISE

TRANSITION
10 SECONDS

Gotta Get Goals
A goal is like a map of where you want to go, or what you want to do, or what you want to know.

Write down three goals for this week.

1. lateral shuffle + slow speed + zigzag path ➔ speed
2. single leg balance (R) + Asymmetrical arms + level hips ➔ level hips
3. run + slow speed + narrow arms/legs ➔ WIDE arms/legs
4. single leg balance (L) + level hips + Weak force ➔ level hips
5. skip + accelerating speed + LOW knees ➔ HIGH knees
6. jumping jacks + speed + small range of motion ➔ LARGE RANGE OF MOTION
7. march + speed + Straight path backward ➔ Straight path forward
Have fun with movement when you’re indoors!

While all circuits in 60 Ways to Play can easily be modified to accommodate any amount of space, we have created 10 circuits ideal for indoors. You will notice the primary difference is that we include many “in place” activities. Note that “in place” does allow for a small degree of movement. For example, rolling on the ground can be done back and forth, as can a movement like the lateral shuffle.

As with all other circuits, perform the fundamental movement skill in combination with the suggested movement variables. Note that when there is an symbol, instruct the child to switch to an opposing movement variable roughly halfway through the circuit.
Skip, Don’t Trip!

**MOVE TIME**

10-20 SEC.

**TRANSITION**

10 SECONDS

**Can You?**

The Blind Balance Challenge

Close your eyes and stand on one foot.

1) How long can you stand on that foot with your eyes closed without losing your balance?
2) Try to beat your time on the other foot.

60 WAYS TO PLAY | USLACROSSE.ORG
Move with a friend!

Partner activities function to improve social skills as well as facilitate cooperation and teamwork.

We have created 5 circuits to facilitate children working with and around others. In a 1-1 teaching situation, you as the instructor can be a partner! It’s important that partners are established prior to beginning the circuit.

When using variables such as “over,” “around,” “in between,” and other relationships, instruct the children to alternate using each other as the “object” to navigate when possible.

**The Shoe-tie Shoot-out**

While balancing on one foot, lift the other foot and untie, then tie your shoe. Repeat on the other foot. Can you do it without losing balance? Challenge a family member or friend to do the same!
CREATIVE DISCOVERY

Playing with Movement Variables

Learn All the Different Ways the Body Can Move!

**Total Physical Response (TPR)** is a technique that has been used in the classroom for years to successfully improve language acquisition. Whether in a classroom or any other venue for physical activity, it’s a fun and effective way to link movement and learning!

By having kids interpret words and punctuation marks with their bodies, the Movement Sentences allow kids to get the best of both worlds, developing language skills and physical literacy with creative exploration!

The Movement Sentence circuits consist of 4 skill levels, as well as advanced circuits, and mixed circuits. All the levels build on the previous level and allow kids the opportunity to start with simple movement expressions based on one direct action word at a time in level 1 until they are ready to string together direct and abstract words as well as punctuation marks and emojis in the most advanced levels.
While we don’t want to ever judge a movement as right or wrong, or over-correct a child, it is a good idea to frontload vocabulary to make sure they know what words mean before you begin.

You can then coach during the activity with suggestions if a child seems lost. For instance, if the word is soar you can talk about animals that soar high in the sky like eagles. For slither, you might mention snakes.

Some words like zip, scamper, brave, or perplexed may be a bit too hard of a concept to grasp, so rather than just give an example like a dog scampering along, ask them to do whatever that word sounds like. This will give you great insight into how they can interpret word sounds and see how close they come to the actual meaning. It is also a very creative way for kids to move with total freedom, as there really can’t be a right or wrong way to interpret the word. Eventually, the goal is to help define the words so kids learn the vocabulary and get more and more creative each time they do that circuit.

Click here to see the movement sentences in action!

On the following pages, we have included a vocabulary chart for the words used in the Movement Sentence creative discovery activities. This acts as a reference for the vocabulary, emojis, and different terms used in the circuits.

CREATIVE DISCOVERY
Circuits

Level 1
ONE DIRECT ACTION WORD

Level 2
TWO TO FOUR DIRECT ACTION WORDS IN ORDER

Level 3
THREE DIRECT ACTION WORDS IN ANY ORDER

Advanced
ADD ABSTRACT WORDS & EMOJIS

Level 4
THREE OR MORE DIRECT ACTION WORDS WITH PUNCTUATION

Mixed
ONE DIRECT ACTION WORD
In this beginner level, each circuit consists of just one direct action word such as roll, crawl, or explode. Say the word and allow kids 10 to 20 seconds to move in any way that expresses this word. Make sure the kids understand that once they interpret the word with movement they are to do it over and over until time is up for that circuit.

**In each circuit move in any way that best characterizes each direct action word for 10–20 seconds.**
Roly Poly

1. Roll

Read What you Eat!
When food comes in a box, the back is good reading. Can you say all the words in the food you’ll be eating?

Write out the ingredients of your favorite snack. Do you know what those are?
In level 2, they are now ready to string together a movement sentence! The same direct action words they learned in level 1 will be linked together here in sentences from 2 to 4 words long. This level now introduces the concept of transitions which will reinforce the development of movement efficiency.

In level 2 it starts to look like a dance! For each circuit simply say or write the words in the sentence first and frontload any unfamiliar vocabulary. They must perform the words in order, transitioning from one to the next and repeating the sequence for the allotted amount of time. It is helpful to say each word in the sentence to prompt them to transition as they move. Older or more experienced kids may not need the prompts and they can choose when to transition.

The arrow ➡️ between each word means that they are to move to the next word in order.
Example: For the movement sentence:

Jump ➔ Sneak ➔ Soar

You could start by defining, or giving a hint for the meaning of the word that might be difficult. In this case, for “soar” you might say, “birds can SOAR high in the sky”. Either write the sentence on chart paper, a large board, or project it on a screen. Tell the kids to act out each word in order and repeat the sequence until you call time (10-20 seconds). Alternately, you can prompt each word orally. Just say the word they should move to, when you say the next word they simply transition to the next word. For 2 to 3 word sentences, you could go through the sentence twice. For longer 4 to 5 sentence words. One time through will probably be enough.

In each circuit, link the direct action words together that are separated by an arrow, in order to create a smooth movement sentence. Do each movement sentence for 10–20 seconds.
The Sneaky Crawler

MOVE TIME
10-20 SEC.
EACH MOVEMENT
SENTENCE

1. Crawl → Roll
2. Crawl → Roll → Explode
3. Crawl → Roll → Explode → Fly
4. Hurry → Swerve

### The Superstar Handshake

When you shake someone’s hand, whoever they are, squeeze like you mean it, they’ll think you’re a star!

Practice a good handshake!
The Pouncing Panther

1. Crawl ➔ Explode ➔ Sneak
2. Shrink ➔ Wave
3. Shake ➔ Erupt ➔ Pounce
4. Stride ➔ Spring ➔ Wave ➔ Shrink
5. Sneak ➔ Roll ➔ Soar
6. Creep ➔ Pounce
7. Bounce ➔ Wave ➔ Spin
8. Shrink ➔ Spring ➔ Rush ➔ Wiggle
9. Slither ➔ Pounce ➔ Roll
10. Sneak ➔ Wiggle ➔ Crawl

Can You?

Count Your Heart Beats.

Hold your pointer finger and your middle finger together, Place them on the underside of your wrist, right below your thumb. Feel around until you can feel your heart beat on your wrist! Teach a friend or family member to do the same!
Soaring Eagle

Did You Know?
Your upper leg bones are your quadriceps (front) and your hamstrings (back).

MOVE TIME
10-20 SEC.
EACH MOVEMENT SENTENCE

1. Soar ➔ Roll
2. Roll ➔ Creep
3. Wave ➔ Erupt ➔ Crawl ➔ Slither
4. Shrink ➔ Explode ➔ Scamper
5. Spring ➔ Stride
6. Zip ➔ Zoom ➔ Wiggle
7. Shake ➔ Dart ➔ Fly
8. Rush ➔ Sneak
9. Scurry ➔ Wave ➔ Pounce ➔ Roll
10. Spring ➔ Plummet
In level 3, kids will be able to have some say in what they do. They can choose 3 words out of a list of 4 to 6 direct action words, and put them together in any order they like.

The words will be separated by a SQUIGGLY SLASH.

Having this choice fosters autonomy, which gives kids a sense of ownership. When they feel like they are helping to construct an activity and can freely interpret the words, they begin to feel competent with movement and this helps them develop more self-confidence.

Autonomy and competence, along with the sense of community they get doing these activities as a group, have been shown in studies to increase a child’s motivation and desire to move more and stay engaged in physical activity for a lifetime.
Example: For the movement sentence:

Roll Sneak Shrink Wiggle Rush

You could start by defining, or giving a hint for the meaning of the words that might be difficult. In this case, the words are all simple so it might not be necessary to define any. Either write the words separated by a slash on chart paper, a large board, or project it on a screen. Tell the kids to choose 3 words they want to interpret. Let them know that they can act out each word they choose in any order and repeat the sequence until you call time. Alternately, you can say all 4 or 6 words out loud and have the kids pick out 3 from your list.

In each circuit, choose 3 direct action words in any order and link them together to create a smooth movement sentence. Do each movement sentence for 10–20 seconds.
The Dizzy Wiggle

Level 3 Creative

9. **Slither** ☐ **Shrink** ☐ **Creep** ☐ **Zoom**
10. **Plummet** ☐ **Hurry** ☐ **Dart** ☐ **Wave** ☐ **Spring**
In level 4, we introduce punctuation marks to our movement sentences. Now kids are going to inject some emotion into each word! It is important to frontload the meanings of the punctuation marks, such as a question mark (?) means doubt or uncertainty.

This is definitely more advanced as kids must be able to provide more levels of nuance for each word. In some instances the same words will be listed in the same order in more than one circuit. The only difference is that each word will have a different punctuation mark. This will help them create a more clear contrast of how to interpret the word based on the punctuation.

Example: Before starting any level 4 circuit, begin by going over the meaning of all punctuation marks. For instance, The exclamation point means “excitement,” the question mark means “doubt” the dash means “a long pause”. If there is an arrow just transition directly to the next word.
Example: For the movement sentence:

Sneak ➤ Pounce! Explode? Slither -

You could start by defining, or giving a hint for the meaning of the word that might be difficult. In this case, for “slither” you might say, “think of an animal that might slither on the ground like a snake”. Either write the sentence on chart paper, a large board, or project it on a screen. If this is not an option, simply say each word and punctuation mark in the sentence to prompt them to move to the next word. Tell the kids to act out each word, in order, as modified by the punctuation mark, and repeat the sequence until you call time. For 2 to 3 word sentences, you could go through the sentence twice. For longer 4 to 5 sentence words, one time through will probably be enough.

Following are examples of how the exclamation point and question mark might be used:

“Explode!” might be a huge, quick jump in the air with both arms and legs extended fully. “Explode?” might be a timid, slow extension of the whole body without jumping and arms and legs only partially extended. An arrow, comma, period, or dash after a word will indicate how long to pause before moving to the next word. For instance, if there is an arrow ➤ they should just flow into the next word. For a comma, there is a slight pause; for a dash, a longer pause, and for a period there should be an even longer pause. This should be a seen as a full stop, where their body goes back to a neutral position. With a comma or dash, they may remain in the previous position before transitioning to the next word. If a word ends with an exclamation point and the next word ends with a question mark (or vice versa) there is no pause. They should just flow into the next word.

In each circuit, move in any way that best characterizes each direct action word and punctuation mark in order. Do each movement sentence for 10–20 seconds.
Blast off!

### Level 4 Creative

**MOVE TIME**

10-20 SEC. 
EACH MOVEMENT SENTENCE

**Did You Know?**

Our bodies use fat, protein, and carbohydrates for fuel.

1. Swerve - Spin! Crawl.
2. Roll, Hurry? Bounce!
4. Fly, Slither. Hurry? Zoom -
5. Sneak? - Bounce. Zoom!
6. Wave ➡️ Fly!! Spin?
7. Swerve - Soar, Bounce! Scamper
8. Sneak ➡️ Pounce! Explode? Slither -
10. Dash, Scamper, Swerve, Wiggle?

7. Shake, Sneak! Roll.
10. Fly? Crawl! Fly! Crawl?

Time to Teach

Others want to know how you can do the things you do. When you take time to teach them, you get better at these things too!

What is 1 thing you could teach someone today?
### Snake, Rattle n’ Roll!

#### Level 4 Creative

1. Wave! Shrink? Roll, Explode!
3. Slither, Scurry? Soar!
4. Slither! Scurry, Soar?
5. Rush ➤ Zip ➤ Spring ➤ Fly ➤ Plummet
7. Trot, Slither! Erupt?
8. Trot. Slither? Erupt! Soar?
10. Trot! Slither, Erupt. Soar - wave! Swerve?
In the advanced circuits we introduce abstract words and emojis. Each emoji is listed with the actual icon image and the name of the emoji below it, such as a picture of a smiley face with “smiley face” written below.

In levels 1-4 the words directly suggest actions that most kids will be familiar with such as shrink, wiggle, or roll. Some of the words are more advanced for older kids, yet are still a direct action, such as plummet, scurry, or stride.

In the advanced level circuits, in addition to emojis, all words used will be abstract, so as to suggest a feeling that can be freely interpreted, such as hot, victorious, or shy. Of course, it is a good idea to frontload vocabulary that may be new to kids and always let them know that if they forget a word’s meaning, or just don’t know it, to simply move in any way that the word “sounds” to them. For instance, words with hard consonant sounds, such as deliberate, might make kids move with more force, whereas words with softer letter sounds, like sunny, might evoke smoother movement.

Each of the four Advanced circuits are presented in order with the first circuit as a level 1 advanced circuit and the fourth circuit as a level 4 advanced circuit. The only difference from the level 1 through 4 circuits described previously is the exclusive use of abstract words in place of direct action words, and the addition of emojis.
EMOJIS: When writing advanced circuits, either draw the emoji or write the word that appears below each emoji. If writing the emoji word description it might be helpful to capitalize or circle the words to show they are part of an emoji. If you are just saying the words and emojis out loud, just say the description below each emoji.

For example, you might say the following sentence with emojis as:

Dark ➡️ Spicy ➡️ SOCCER BALL ➡️ Lazy ➡️ SMILEY FACE

In the level 1 advanced circuit, Hot Ice Cream, one abstract word or emoji is presented for each movement sentence.

In the level 2 advanced circuit, Bumpy, Lumpy, & Smooth, The same type of abstract words and emojis they learned in advanced level 1 will be linked together here in sentences from 2 to 4 words long. For each circuit simply say or write the words in the sentence first and frontload any unfamiliar vocabulary. They must perform the words in order. It is helpful to say each word in the sentence to prompt them to move to the next word.

In the level 3 advanced circuit, Spicy Hot!, they can choose 3 words or emojis out of a list of 4 to 6 abstract words and emojis, and put them together in any order they like.

In the level 4 advanced circuit, Sparky the Spider, kids will interpret each abstract word, emoji, and punctuation mark flowing from one word to the next in order.

In each circuit, move in any way to best characterize the following combinations of abstract words, EMOJIS, and/or punctuation marks. Do each movement sentence for 10–20 seconds.
Hot Ice Cream

1. Hot
2. 🍦
3. Victorious
4. Shy
5. Dark
6. Bright
7. Stinky
8. Proud
9. 🍦
10. Sunny

Did You Know?
Too much sitting can make you sick!
Stand up and move whenever you can.
### Bumpy, Lumpy, & Smooth

**MOVE TIME**

10-20 SEC.
**EACH MOVEMENT SENTENCE**

To feel like a champ, get up and move. Slouching and sitting gets you out of your groove!

Stand up!

### Move Time

**10-20 sec. each movement sentence**

### Can You?

#### Jumping Jack Commercial Break

When you’re watching TV and a commercial break happens, see if you can do jumping jacks for the entire commercial break without stopping. Challenge a friend or family member to do the same!
Did You Know?

There are 100,000 miles of blood vessels in your body.

MOVE TIME

10-20 SEC.

EACH MOVEMENT SENTENCE

1 Bumpy, Hot? Proud.

2 Shy! 😊 - Smooth. Spark?

3 Shy! Brave? Smooth! Bumpy?

5 👍? Lazy. Spicy! Dark,

7 Cloudy, Spicy. Deliberate - Shy! Slimy?

8 Bright. Stinky. Dull! Grumpy, 🌚

9 Deliberate? Happy, 🐛 Vulnerable!

10 Smooth! Shy? Lazy, Spicy? Bold –
In the six Mixed circuits anything goes! Everything presented in all levels up to this point will be mixed together in each circuit. This means that the first movement sentence could be one abstract word, and the next sentence might be a mix of direct action and abstract words strung together with punctuation.

Each of these circuits require that the kids (and instructor!) be very familiar with all the symbols, words, and rules that apply to all the other levels. The mixed level is fast paced and is a culmination of all the work they have done with the other levels.

Successful and smooth completion of mixed level circuits is a sign of mastery of this creative discovery activity. Mixed circuits, therefore, should only be done with older or more experience students or the result could be frustration both for kids and the instructor.

**In each circuit, move in any way to best characterize the following combinations of direct action words, abstract words, EMOJIS, and/or punctuation marks. Do each movement sentence for 10–20 seconds.**
Deep Breaths on Dog Days

When you’re grouchy or slouchy or grumpy or glum, try taking a deep breath, then you’ll feel ready for fun.

Take three deep, slow breaths.

1. Bumpy
2. Spark
3. Roll, Cloudy
4. Spin Lazy
5. Vulnerable, Wiggle!
6. Crawl, Spicy! Pounce
7. Bold, Mysterious Grumpy
8. Empowered – Overwhelmed, Jump?
10. 😊 Shrink, Cloudy
